YOU CAN PREVENT

- Dizziness
- Weakness
- Nausea
- Vomiting
- Rapid Heart Rate
- Respiratory Arrest
- Cardiac Arrest
- Coma
- Seizures

ATTENTION FIREFIGHTERS

Structural Overhaul Can Kill You.

When firefighters are performing structural overhaul they often "drop their bottles" in order to more effectively perform their jobs. Unfortunately, this practice exposes them to harmful particulate matter that contains numerous poisonous gasses including: Hydrogen Cyanide and Hydrogen Chloride as well as Acrolein, Nitric Oxide and Nitrogen Dioxide. Xcaper smoke filters protect Firefighters performing structural overhaul from all of these deadly agents as well as from Carbon Monoxide.

Only recently have we begun to understand just how dangerous these agents are. Exposure to low concentrations of Cyanide can result in dizziness, weakness, nausea, vomiting, eye irritation and rapid heart rate. Signs of exposure to moderately high concentrations of Cyanide are loss of consciousness, respiratory arrest, cardiac arrest, coma and seizures. In fact, Cyanide poisoning is now being blamed for some firefighter deaths previously thought to be the result of cardiac arrest or heart attack.

When combined with either the Whiffs Brush Pro mask or Manta X bandana, lightweight Xcaper Smoke Filters neutralize these deadly agents. This enables Firefighters to work more effectively and efficiently while protecting their lungs and hearts and securing their futures.

Join Firefighters all over the world in protecting your lungs and heart. Use Xcaper Smoke Filters with patented WHIFFS technology. WHIFFS moist filtration technology has been proven effective in both laboratory tests and in the field to eliminate the toxic gases and particulates that can cause Cyanide and Carbon Monoxide poisoning.
